In the fall of 2014 I was diagnosed with vocal nodules. I had voice therapy sessions, and in the sessions it was suggested that I use an amplification system so I could save my voice in the classroom. Earlier that fall, my district had installed the OWI CRS-201 system in my classroom and the new classrooms that had been added to our building. It has been a lifesaver. My students are able to hear better, including my hearing-impaired students who can now sit directly under the speakers to hear instruction, and it is also improving the quality of my instruction.

My vocal nodules have shrunk in size since beginning to use the system. I would recommend this to any teacher who desires a permanent amplification system in their classroom.

OWI WIRELESS CRS201 SAVED MY CAREER - MRS. DORIAN BAKER

Mrs. Dorian Baker

My mix of fully included special needs students, English language learners, and "regular" ED children are all benefitting from the CRS201 unit installed in my classroom three years ago. Having suffered from damaged vocal chords after 20 years of teaching, I needed to be miked in order to continue teaching.

OWI came to my rescue, and has literally saved my career, but the big surprise was the difference it has made to my students! Remarkably, they respond faster because they can hear my voice so much better, and because I can speak softly, my students no longer think I'm yelling or angry, as young children so often did when I needed to raise my voice to be heard. I am thrilled with the system, and believe that every classroom should have one.

Benefits of a Classroom Sound System

CRS201

- Ease of listening
- Gets and keep attention
- Less voice strain and fatigue
- Increased on task-behavior
- Enhanced sentence recognition
- Fewer requests for repetition
- Reduced test-taking time
- Improved spelling scores
- Higher test scores
- Increased mobility for instructors

OWI

CRS201 – INFRARED WIRELESS MICROPHONE SYSTEM

The CRS201 Infrared Wireless Microphone System (UL Listed) is ideal for classrooms, boardrooms, computer training rooms and hotel meeting rooms. The slim, fully lockable, wall-mounted infrared receiver/amplifier/mixer accepts three different line level inputs. Because the CRS201 is wall-mounted, there are no freestanding or rack-mounted components to take up closet space or be knocked off a shelf, and no unsightly tangle of wires.

The CRS201 System can simultaneously control two infrared wireless microphones, and each device can adjust its volume by independent controls to obtain the best audio effects for each individual room layout.

Available with the Pendant Mic Kits ([CRS201-P](#)) or Handheld Mic Kit ([CRS201-H](#)) with OWI ceiling or surface mount speaker options.
